

## Piper Sudangrass

Sudangrass has the finest stem of the sorghum family products. It is a great hay option or grazing option, and is multi-cut. For those looking to make dry hay, plant 40#/acre and mow with a conditioner. Sudangrass can have a risk of prussic acid poisoning, manage accordingly. Multi-cut option, for best re-growth leave at least 6" of stubble when mowing or harvesting.

Piper is a well known and proven sudangrass variety that can produce good quality summer hay. Piper is an older variety and is not BMR.

**Seeding Method:** Drill or Incorporate

**Seeding Rate:** 25-40#/acre. (Higher rate = finer stems)

**Seeding Depth:** 1/2" - 1"

**Seeding Dates:** 5/10 - 7/15

**Notes:** For best dry hay, make sure mower has a conditioner. Manage potential for nitrate or prussic acid poisoning.
