Pollinator's Special

Looking for something to appeal to butterflies and bees?

Pollinator's Special is a short lived perennial mixture of clovers and other flowering species that is designed to offer a long bloom window!

What's In It: Pollinator's Special is a mixture of multiple red and white clovers, as well as crimson and sweet yellow blossom clover. In addition, this mix contains other attractive flowering species such as phacelia!

Site Prep & Planting: Pollinator's Special does best when drilled or broadcast and incorporated; however, it can also be frost-seeded onto bare ground.

Maintenance: This mix should perform well for two years. Some species will last longer but it may start to lose it's diversity after more than a couple years. Pollinator's Special is designed to be pretty low maintenance, but it does benefit from being mowed a couple times per year, as well as having a low nitrogen fertilizer (such as our 9-23-30) applied.

Seeding Method: Drill or Broadcast & Incorporate

Seeding Rate: 8-10# / acre

Seeding Depth: 1/4"

Seeding Dates: 2/15-5/1.

Notes: Can be fall seeded, but spring is best.
Available in 5# bags!
