

MGF Waterway Mix

Our MGF Waterway Mix is a great option for waterways, dams, ditches, pastures, and areas that are desired to only be mowed a few times per year.

Our MGF Waterway Mix is safe for all classes of livestock.

MGF Waterway Mix contains: Endophyte-Free Tall Fescue, Perennial and Intermediate Ryegrasses, Kentucky Bluegrass, and Timothy. This mix is sod forming and great for erodible areas.

For normal waterways and relatively flat areas, we suggest seeding MGF Waterway Mix at a rate of 25-30#/acre; however, for areas where erosion is likely (dams, dry-dams, etc.), consider using 35-40# per acre.

MGF Waterway Mix can be seeded by itself or with a companion crop such as oats or wheat to help increase tonnage and reduce weed competition.

Seeding Method: Drill, or Broadcast

Seeding Rate: 25# for flat areas, 35-40# for HEL

Seeding Depth: 1/4" - 1/2"

Seeding Dates: 3/1 - 5/1 or 8/15 - 9/20

Notes: Comes in 25# bags.

This mix does not meet NRCS cost share standards.
