

## Econo Waterway Mix

Our Econo Waterway Mix was designed as a cheaper alternative to our popular MGF Waterway Mix. Unlike our standard mix, Econo Waterway Mix is not meant for livestock or forage harvest.

Econo Waterway Mix contains: KY31 Tall Fescue, Intermediate and Annual Ryegrasses, Kentucky Bluegrass, and Timothy. This mix is sod forming and great for erodible areas.

For normal waterways and relatively flat areas, we suggest seeding Econo Waterway Mix at a rate of 25-30#/acre; however, for areas where erosion is likely (dams, dry-dams, etc.), consider using 35-40# per acre.

Econo Waterway Mix can be seeded by itself or with a companion crop such as oats or wheat to help increase tonnage and reduce weed competition.

**Seeding Method:** Drill or Broadcast

**Seeding Rate:** 25# for flat areas, 35-40# for HEL

**Seeding Depth:** 1/4" - 1/2"

**Seeding Dates:** 3/1 - 5/1 or 8/15 - 9/20

**Notes:** Comes in 50# bags.

This mix does not meet NRCS cost share standards.
