

Product Tech Sheet

Gobbler's Grub™

Gobbler's Grub™ is our proprietary mixture of red clovers, white clovers and chicory. Formulated by our agronomists and local team of experienced wildlife experts. this mix is appealing and attractive to both turkeys and deer for several years.

What's In It: We combine multiple varieties of both red and white clover to improve the durability and performance. By having multiple varieties, the maturity window will be spread out allowing Gobbler's Grub™ to stay at it's peak appeal for longer! This mixture also contains a high quality forage chicory!

Site Prep & Planting: This mix is meant to be seeded pretty shallow, so have a firm seed bed to start. Gobbler's Grub™ is easy to establish, and manage. It can be frost seeded, broadcast, or drilled. For best results, if broadcasting use a harrow to lightly incorporate or a roller to establish good seed to soil contact.

Maintenance: After this mix is established, it can benefit from being mowed (leave 3-5") a couple times per year, but it can manage without mowing as well. Apply a low nitrogen fertilizer (like our 9-23-30) to ensure maximum productivity. Typical fertilizer rate is 2-4 bags / acre.

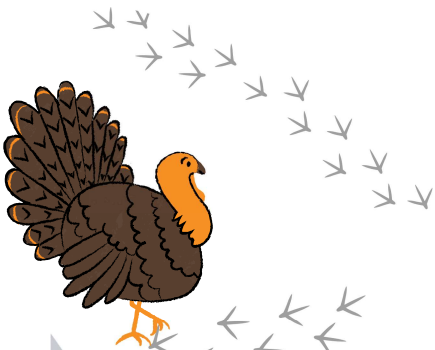

Seeding Method: Frost seed, Drill, or Broadcast

Seeding Rate: 8-10# / acre

Seeding Depth: 1/4" - 1/2"

Seeding Dates: 2/20 - 5/1 or 8/15 - 9/20

Notes: This plot can be sprayed to control grassy weeds! Available in 5# or 25# bags!
