

White Dutch Clover

White Dutch Clover is a low growing white clover commonly used in lawns, and on trails. It is very traffic tolerant, making it durable enough to withstand repeated foot or wheel traffic. It spreads via stolons, so it is able to fill in gaps and create a thick stand over time.

White Dutch is low growing enough that it can be interseeded into lawns and persist even with regular lawn mower usage. For lawns, seed half to one pound per 1000sq ft.

It handles full sun to moderately shaded areas. It can be seeded alone for trails / food plots or mixed with other clovers or grasses.

Seeding Method:	Frost seed, drill, broadcast
Seeding Rate:	6-8# full stand, 1-3# for mixes & overseeding
Seeding Depth:	1/4"
Seeding Dates:	Seeding Dates: 2/15 - 5/1 or 8/15 - 9/20
Notes:	Can cause bloat, manage appropriately. May be slow to dry down for hay.
